IPO SUBSCRIPTION & LISTING GAINS

Do fintech brokers drive IPO demand?

This study examines how investor-category subscription (QIB, NII, Retail, Employee) relates to listing-day price performance of Indian IPOs, and whether the rise of discount and fintech brokers (Zerodha, Upstox, Angel One, Paytm Money, Groww) changed retail participation. The original thesis covered 2007–2023; this extension adds every Mainboard and SME IPO from January 2024 to September 2026, taking the dataset to **2,020 IPOs**, and re-tests the post-fintech correlations on the longer window.

2024–25 = December; 2026 = September (NSE Report 1C)

Key Findings

- **Record activity:** IPO counts hit new highs of 335 in 2024 and 375 in 2025 (Mainboard + SME), against 230 in 2023; 242 IPOs listed in Jan–Sep 2026.
- **Demand peaked in 2024:** average retail subscription reached 191x (vs 88x in 2023) and NII 314x; both cooled to 65x and 137x in 2025 and 54x / 104x in 2026.
- **Listing gains followed demand:** average listing-day gain hit 53.5% in 2024 with 85% of IPOs closing above issue price, then fell to 12.5% (2025) and 13.4% (2026).
- **Discount brokers kept consolidating:** Groww's share of NSE active clients rose from 20.8% (2023) to 29.2% (Sep 2026), while Zerodha slipped from 19.4% to 14.7%.
- **The fintech link weakens after 2023:** broker shares kept rising while subscriptions and gains cooled, so the correlation of retail subscription with Groww's share drops from 0.95 to 0.62, and of retail listing gain from 0.99 to 0.24.
- **Institutional demand stays the anchor:** QIB subscription and QIB-linked listing gain remain tightly linked (0.91 in both windows), and NII and QIB move together more strongly (0.81 → 0.93).

Correlation: original vs extended window

Pair (yearly averages)	2014–23	2014–Sep 26	Change
Retail subscription vs Groww share	0.95	0.62	-0.33
Retail subscription vs Zerodha share	0.55	0.43	-0.12
Retail subscription vs Angel One share	0.87	0.76	-0.11
Retail listing gain vs Groww share	0.99	0.24	-0.75
Retail listing gain vs Angel One share	0.95	0.72	-0.22
NII vs QIB subscription	0.81	0.93	+0.11
Retail vs NII subscription	0.42	0.88	+0.46
QIB listing gain vs QIB subscription	0.91	0.91	+0.00

Methodology & Data

IPO-level subscription split into category ratios; listing-day % change allocated to each category by its share of subscription; yearly averages correlated with broker market shares (Pearson). Excludes InvITs, REITs and FPOs. Some 2024–25 BSE-SME IPOs lack listing prices and are excluded from gain averages. BSE broker data unavailable after 2023.
